

Chlorophyll

Joe Bruno

Chlorophyll – the chemical that gives us food.

Chlorophyll – it puts us in a happy mood.

Chlorophyll – makes oxygen for the air.

Chlorophyll – green colors everywhere.

(CHORUS)

Photosynthesis, you know,

always keeps us on the go.

**Changing sunlight, water, and the air,
into everything we share.**

Chlorophyll – the forest full of trees.

Chlorophyll – it's working in the leaves.

Chlorophyll – makes pollen for the bees.

Chlorophyll – it sometimes makes us sneeze.

(REPEAT FROM BEGEMNING)
